- From 29 April 1954 on, transmitter 21 at the Koenigswusterhausen radio base station will operate on 882 kcs, for the purpose of jamming RIAS transmissions.¹ Prior to that date the transmitter operated on the same frequency as the RIAS transmitter. On the first day of operation the jamming was heard during reception of the RIAS program, albeit rather faint. The change in the jamming frequency was made because of technical reasons. According to an expert, the old frequency could no longer be used.
- Transmitter 8 transmits messages for the Foreign Ministry (Ausserministerium). The following new frequencies are in effect:

Frequency No.	Kilocycles
1	3875
2	4430
3	6875
4	9057
5	11270
6	11340
7	14410
8	16358
9	17395
10	19443

- A new type of jamming transmitter has been developed by the radio base station and manufacturing concerns, but the development has not yet been completed. Construction of this transmitter has not yet begun, but is expected to start in the near future. The new jamming stage (Steersenderstufe) is to be stronger than that used in the past; it is expected to be between 20 and 40 kw. The new jamming transmitter is scheduled to be completed by 1 June 1954, with several prototypes available for operation. The location of this new type of transmitter has not yet been announced.

 Comment. According to information from another source via another channel, one 100 kw transmitter at Keenigswusterhausen transmitted on 833 kcs up to 9 March 1954; this transmitter broadcast Berlin I programs. However, on 23 March 1954, Keenigswusterhausen transmitted on 1016 kcs instead of 833 kcs.
